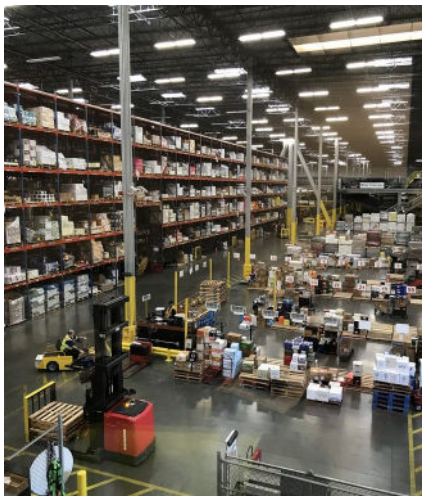
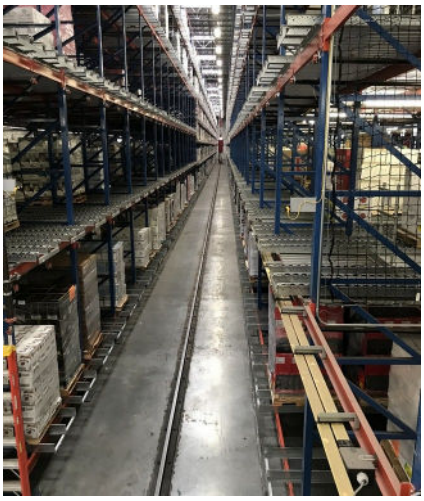
WAREHOUSE & DISTRIBUTION DEEP CLEANING

Scheduled deep cleans around live operations | Alameda & Contra Costa Counties

A distribution building does not stop for cleaning, so the work has to fit around racking, lift traffic and shift schedules. System4 scopes warehouse deep cleans in zones — floors and traffic lanes machine-scrubbed, racking and pick faces wiped, overhead structure and duct tops cleared, and equipment sheeted before anything comes down.



High-bay racking, cleaned around operations



Narrow aisles — access planned in advance

Traffic lanes carry the heaviest soil

Staging and dock areas — spills and grit

Overheads collect what the floor does not

Equipment sheeted before dust is disturbed

WHAT A WAREHOUSE DEEP CLEAN COVERS

- Floors machine-scrubbed; lanes, edges and corners detailed
- Racking uprights, beams and pick faces wiped down
- Overhead structure, duct tops, conduit and light fixtures
- Dock doors, levelers, plates and thresholds
- Restrooms, break rooms and locker areas
- Zoned around live operations — nights, weekends or shutdowns

Scope your next shutdown or reset.
